New chat

matches the location of your Swagger annotations. For example, if your Swagger annotations are located in a separate file called `routes.js`, you would need to update the `apis` option to `['routes.js']`.

Here's the updated code with the Swagger options updated to use the correct file:

javascript   Copy code

```javascript
// Import required packages
const express = require('express');
const swaggerJsDoc = require('swagger-jsdoc');
const swaggerUi = require('swagger-ui-express');

// Create a new Express app
const app = express();

// Define the Swagger options
const swaggerOptions = {
  swaggerDefinition: {
    openapi: '3.0.0',
    info: {
      title: 'My API',
      version: '1.0.0',
      description: 'My API documentation'
    },
    servers: [
      {
        url: 'http://localhost:3000',
        description: 'Development server'
      }
    ]
  },
  apis: ['routes.js'] // Replace with the location of your Swagger annotations file
};
```
